The pain and swelling the body caused made it difficult to bear, but the body has just done you a big favor. The symptoms of inflammation may not feel very good, but the body has just done you a big favor. Inflammation can be both acute and chronic. The acute inflammation that occurs following an injury is beneficial as it helps the body repair itself. Chronic inflammation, on the other hand, can be harmful and is associated with many diseases such as heart disease, cancer, and diabetes.

Inflammation is the body's natural response to injury or illness. It helps the body to heal itself and to protect itself from infection. However, when inflammation becomes chronic, it can cause damage to the body. Chronic inflammation is associated with many diseases such as heart disease, cancer, and diabetes.

Many people have inflammation in their bodies that they do not even know about. If you have pain or swelling that does not go away, you should see a doctor. They can determine if you have inflammation and what is causing it.
